

String in python

Strings

In python anything that you enclose between single or double quotes the output remain the same

Example

```
name="Munawar"  
friend="Ali"  
single='Twinkle twinkle '  
print("hello my friend ",friend)  
print("poem is ",single)
```

Multiple quote string

```
newpoem="""baby baby yes mama  
eat sugar no mama  
telling alive no mamoo  
open your mouth hey hey hey  
"""  
print(newpoem)
```

Accessing character

Print(newpoem[14])

Return m

```
print(newpoem[14])  
print(newpoem)
```

Access using loops

```
for poem in newpoem:  
    print(poem)
```

Source Code

```
name="Munawar"
friend="Ali"
single='Twinkle twinkle '
print("hello my friend ",friend)
print("poem is ",single)

newpoem="""baby baby yes mama
eat sugar no mama
telling alive no mamo
open your mouth hey hey hey
"""
print(newpoem[14])
print(newpoem)
for poem in newpoem:
    print(poem)
```

Thank You
