

Our First Program

Print()

It is a function.

Print("Hello World")

Output Hello World

If we write repl code in power shell then it execute code manual and print each line.

But in python interpreter script execute line by line.

Source Code:

```
print("Hello World")#This is our first program
print(5)
#dayFourCode is a script if we use this it execute line by line
print(5*5)
print("Good night")
print("Twinkle twinkle litte star")
```

Thank You
