Taking User Input

User input

User input take using input function.

Example

```
variable=input("Enter your string : ")
print("You Enter ",variable)
```

String concatenation

```
num1=input("enter first number : ")
num2=input("enter second number : ")
num3=num1+num2
print(num3)
//for example first number 12
//second number 12
//result is 1212
```

Source Code

```
variable=input("Enter your string : ")
print("You Enter ",variable)
num1=input("enter first number : ")
num2=input("enter second number : ")
num3=int(num1)+int(num2)
print(num3)
```

Thank You
