Shutil Module in python

Shutil is a Python module that provides a higher level interface for working with the file and directories. The name "shutil" is short for shell utility. It provides a convenient and efficient way to automate tasks that are commonly performed on files and directories.

Functions

The following are some of the most commonly used functions in the shitil module.

Copy

Copy2

Copytree

Move

Source Code

```python
import shutil
# shutil.copy("dayEightySevenday.py","main.py")

# shutil.copytree("one","newone")

# shutil.move(".1/file.file","file.file")
```
